'The Stylish way to Control your Lighting'

Blinded by the LIGHT  
Manfred Mann (#6 in August 1976)

SceneStyle4 from Mode is the stylish way to control your lighting. Self-contained, it connects to your existing wiring without fuss and can control up to four independent circuits of lighting. It can quickly and easily be programmed by the user to store any combination of four moods or "scenes", as well as on and off.

By selecting the different scenes, areas of your home can have completely different lighting atmospheres to suit your use of the space. So you can turn your living room into a home cinema, the day room into a quiet snug and the conservatory into a dining room, all at the touch of a button. You can also select "full on" for cleaning or manually increase or decrease the brightness of an individual scene or circuit. Each scene can be any combination of the four lighting circuits at any brightness level from a soft glow to a bright illumination. Even the time taken to "fade" between each different mood is programmable.

For example, in a kitchen-diner, there may be low voltage recessed down-lights in the ceiling, mains voltage wall lights, low voltage task lights under the wall cabinets and a pendant light over the dining table. By simply pressing a button, you can choose to alter the lighting levels to suit "food preparation", a "family meal", a "romantic dinner" or a "vibrant" party mode.

Each SceneStyle4 is supplied as standard with an eight-button infrared handset that mimics the control panel, so you do not even have to leave the comfort of your favourite chair to enjoy hi-tech control of your lighting.

# Ray of LIGHT

Madonna (#2 in May 1998)

SceneStyle4 was designed and developed in the UK to be a practical, reliable, easy to install and above all a stylish addition to any room. The finely crafted SceneStyle4 is equally suitable for either residential or commercial applications and is fully compliant with all relevant safety standards. SceneStyle4 is a complete "one-box" solution that fits into a 47mm UK, double-gang sized, back box. Its unique circuitry, does not require a neutral connection, thus eliminating the need for mains rewiring and making it an ideal solution to replace existing light switches or traditional rotary dimmers. SceneStyle4 incorporates state-of-the-art trailing edge technology that dims all types of GLS lamps, GU10 mains halogen, low voltage electronic transformers and other compatible lighting loads without buzzing.

The screwless, clip-on, metal front fascias are available in four standard finishes: Brushed Stainless Steel, Polished Chrome, Polished Brass and White, which all exude quality and feature subtle rounded corners and a slim profile. Other finishes and styles are available to special order. The SceneStyle4 buttons, which are available in either black or white to complement the fascias, have been designed to give a pleasing tactile feel. Even the button indicators can be set by the user to be one of seven stunning colours to harmonise with your interior décor.

Installing Scenestyle4 will even reduce your impact on the environment as dimming the lighting will lower energy consumption. Even at full brightness, SceneStyle4 actually runs the lighting at a subtly reduced level which gives an instant energy saving and increases lamp life, bringing savings not only in the cost but also the inconvenience of replacement lamps.
